April 2013 Newsletter

OUR NEXT MEETING

Thursday, April 11
7:30 pm
Friendship Auditorium
3201 Riverside Drive
Los Angeles CA 90027

We meet the second Thursday
of each month at 7:30 pm

This meeting is free to SCHS
members and is \$5 for non-
members without a guest pass.

Bring one or more plants,
flowers, seeds or fruits for
display and discussion at the
Plant Forum. These plants are
also included in our
newsletter's *Green Sheet*.

NO APRIL OPPORTUNITY DRAWING

There will not be an
Opportunity Drawing at our
April meeting, however, we
will be resuming the plant
drawings soon, on an
occasional basis, to make them
more special and desirable. You
will be able to purchase plants
at most of our meetings.

WELCOME NEW MEMBERS!

James Gardner
Katherine Gillespie
Paula Henson
Kimberly Stanton
Juliah Thrift

NEXT SHARING SECRETS QUESTION

Inspired by this month's
program, the Sharing Secrets
question for April is:

*"What is the most heinous
'Crime Against
Horticulture' you have
witnessed?"*

*(Remember, you can answer
anonymously.)*

You can answer on the cards
we'll supply at our April 11
meeting, on our MemberLodge
website or e-mail your response
to sglarkspur@aol.com by Friday,
April 12.

The April Meeting

Billy Goodnick: *Crimes Against Horticulture*

Our April 11 meeting of the Southern
California Horticultural Society features
Billy Goodnick with his presentation,
*Crimes Against Horticulture: When Bad
Taste Meets Power Tools*.

Goodnick, an accomplished musician,
discovered the world of plants through his
fascination with bonsai and Japanese
gardens.

His studies in Ornamental Horticulture led
to work in nursery sales, landscape
installation, maintenance and design. He

soon earned a degree in landscape
architecture from Cal Poly San Luis Obispo
and went on to work as the City Landscape
Architect for the City of Santa Barbara.

While there, he designed and managed the
construction of parks and playgrounds – and
developed policies that continue to enhance
one of the world's most beautiful cities.

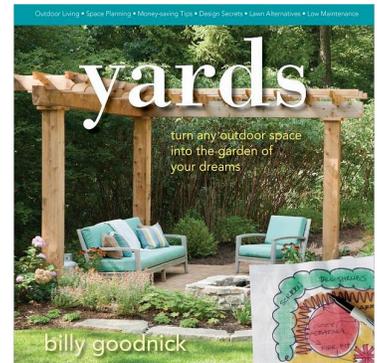

Goodnick, one of the Garden Wise Guys
(along with Owen Dell) from the popular
Public TV show in Santa Barbara, has
become well known for his humorous
approach to teaching the public how to
beautify their landscapes while focusing on
sustainable gardening practices.

His talk will cover the funny, sometimes
disturbing side of what people do in the
name of horticulture: green meatballs on
spindly stems and olive trees made into
sinister, multi-headed hydras (my favorite –
the water heater-shaped shrub).

The essence of the talk, however, will be on
creating sustainable gardens that are not at
odds with nature. As an extra bonus, some
lucky participants will receive rolls of yellow
crime scene tape declaring "Crimes Against
Horticulture" (Mr. Goodnick disavows any
responsibility for where and how the tape
might be used by participant.)

- By Steven Gerischer

APRIL SELECTED BOOK

At our April meeting, you may purchase the
newly-released book by **Billy Goodnick**,
*Yards: Turn Any Outdoor Space into the
Garden of Your Dreams*.

Learn how to achieve a low-cost, low-
maintenance yard that's environmentally
savvy as well as beautiful – a place that
works for every need, starting with a plan.

Published by St. Lynn's Press, March 2013.
Hardcover, 8.2 x 8.2 x 0.6 inches, 160 pages.
Full color photographs throughout.

Billy will be selling his book for \$17.95 and
20% of book proceeds will be donated to our
Society. He will be available to sign your
copy after his talk.

March Meeting Recap

Our March meeting of the Southern California Horticultural Society featured our own **Bart O'Brien** presenting highlights from the recent Salvia Summit II, held earlier this month at the Huntington Library and Botanical Gardens.

The Salvia Summit, a two-day event, covered a wide range of subjects from the botany of the genus to growing trials in Australia, to medicinal uses of salvia. Bart showed us many of the images each speaker used in their presentation as he distilled the salient points from each of those talks.

We were treated to samples including Argentine salvias from the studies of Rolando Uria, forensic research on salvias (especially *Salvia divinorum* – the only hallucinogenic species) from Jack Hurd of the Alaska Crime Lab.

Many of the talks covered the on-going discussion and disagreement over what constitutes a salvia, and whether all of the related plants should be included in the genus.

Growing trials in Australia were shown, from the talk by Sue Templeton, as well as the fascinating relationship between salvias and their pollinators from the work by John Whittlesey.

The growing conditions of the steppes of America was the subject covered by Panayoti Kelaidis – showing how many salvias are well suited to the growing conditions in the central part of the country.

There were also some intriguing pictures from the talk by Ernst van Jaarsveld, about the salvias of Southern Africa. Bart ended with a shortened version of his own summit presentation, California salvias and their cultivars. A big thank you to Bart for giving us this remarkable look into the Salvia Summit.

John Schoustra and **Matt-Dell Tufenkian** offered plants for sale (many salvias were on the sales tables). Thanks to everyone who brought plants for the forum table.

Thank you as well to all of the people who help set up the meeting, sign in our guests, run the AV equipment and help clean up afterward.

Please join us for our next meeting as **Billy Goodnick** presents his talk, *Crimes Against Horticulture*, on April 11.

- By Steven Gerischer

SHARING SECRETS

In March, we asked you to answer "Which salvia is your favorite and why?" and here are some of your responses. Read more on our SCHS MemberLodge website, schs.memberlodge.org.

My favorite salvia is *S. apiana* because it is elegant and aromatic, and also because I love plants with great stories to tell, and each of this plant's many names has a tale.

In addition to "white sage" and "bee sage" it has at least a dozen different Native American names, which shows its importance to the many different peoples who live throughout its range and appreciate its medicinal, culinary, spiritual and ornamental uses.

The "api" in "apiana" is the same as the "api" in apiary because bees are very attracted to its flowers and produce fantastic honey from its nectar. It is also known as sacred sage because of its importance in purification ceremonies, and its genus name comes from the Latin "salvus" which means healthy, uninjured and/or safe – character traits people value in many of its relatives around the world.

- Sandy Masuo

One of my favorite sages is *Salvia clevelandii* 'Winnifred Gilman' because of its neat, rounded shape, dark-colored flowers and stems and incredible sweet scent. I planted two outside a window that we usually open during the day. When the sun warms the plant, or when it rains, the scent permeates the room. The cultivar 'Betsy Clebsch' is even more awesome because some of the flowers are pure white.

- Laura Bauer

Salvia heldreichiana. It's a 1 x 1 foot subshrub with 1 foot spikes of big, purplish-blue flowers, just coming into bloom now. Very drought tolerant. Native to southern Turkey. I got mine in 2004 from Chris and Trish Meyer when they were still in Southern California. It's oddly uncommon for one that does so well here.

- Kathy Musial

Salvia 'Mole Poblano' – because it's hot!

- Ann Brooks

Salvia chiapensis – blooms all year, sun or shade, leaves look bright, flowers are showy and hummingbirds love it.

- Eric Brooks

SECRET CONTRIBUTORS

Salvia canariensis – large, showy inflorescens; unique, triangular foliage; large, slope "filler."

UPCOMING FIELD TRIPS & COFFEE IN THE GARDEN

Although we had to cancel our trip to an "urban farm" near Griffith Park, we are researching other similar venues for another trip later – stay tuned!

We are also working on *Chavez Ravine Arboretum III: The Eucalyptus Collection* for a time in June. This would be another session with our tree experts at the beautiful Chavez Ravine Arboretum, followed by a picnic lunch.

When the weather heats up in July, we will be planning a **trip to coastal Ventura County**, home of some wonderful specialty nurseries.

And building on the success of our very first *Coffee In The Garden* at **Joan Citron's garden** a couple of weeks ago, we'd love to open up to our membership the opportunity to share **your garden** and the stories that accompany it – and we ALL know there are so many interesting stories that we can relate to behind each garden – by **hosting future Coffee in the Garden events at your garden space**.

The garden doesn't need to be a particular style, size or location. As members, we appreciate all of our varied interests and experiences and are always eager to see what others are growing and are passionate about. If you are interested in hosting us, please contact **Joel Lichtenwalter** at: socalhortsociety@gmail.com.

- Laura Bauer

EVER THINK ABOUT JOINING OUR BOARD?

If you were at our March meeting, you heard Steve Gerischer announce that we will be losing several current board members at the end of June, primarily due to terms ending.

That means our nominating committee is seeking members who are interested in serving on our board.

As we are an all-volunteer, non-profit organization, we have an active, working board that takes on the responsibilities of running our Society.

We meet every other month at Descanso Gardens from 7:30–9:30 pm. Business is carried out through e-mail communications between meetings. Terms begin July 1.

If you have any questions or have an interest in being considered as a candidate, please contact **Steve Gerischer** at sglarkspur@aol.com. Voting for board nominees will take place in June.

socalhort.org

GREEN SHEET

SOUTHERN CALIFORNIA HORTICULTURAL SOCIETY

DECEMBER 2012 / JANUARY 2013
PLANT FORUM NOTES

Compiled by Sula Vanderplank
Photographs by Paul Martin

Thank you to all who brought plants to the December 2012 and January 2013 meetings. Everyone is encouraged to bring in plants to share with the group. Remember that you do get one free Exhibitor's Ticket for the Opportunity Drawing if you bring in one or more plants for discussion at the Plant Forum table.

In addition to the plants discussed below, the following plants, described or listed in the Society's *Selected Plants for Southern California Gardens* (2000) or previously written up for a *Green Sheet*, were shown. [Family names in accordance with the Angiosperm Phylogeny Group II (<http://www.mobot.org/mobot/research/apweb/>) are included for your reference.]

- Datura metel* cultivar (Solanaceae), exhibited by Ann Brooks, grown in Baldwin Hills.
- Deppea splendens* 'Cristobal' (Rubiaceae), exhibited by Eric Brooks, grown in Baldwin Hills.
- Lithodora diffusa* 'Grace Ward' (Boraginaceae), exhibited by Patricia McGrath, grown in Silver Lake.
- Salvia costaricensis* (Lamiaceae), exhibited by John Schoustra.
- Salvia* 'Waverley' (Lamiaceae), exhibited by Gary Kamisher.

Information in this compilation was gleaned and condensed from the Plant Forum exhibit cards, my personal library, and a suite of various internet sites.

Erica × *darleyensis* 'White Perfection', White Perfection heath (Ericaceae), exhibited by Patricia McGrath, grown in Silver Lake.

This attractive evergreen shrub has a dwarf habit, reaching only 16 inches tall. Small white flowers are borne in clusters during winter and spring. This plant recently won the Award of Garden Merit from the Royal Horticultural Society of Great Britain. It is noted to require very little care and to take 2 to 5 years to reach maturity. It is generally pest free and can be propagated by semi-hardwood cuttings, likes well-drained, neutral to acid soils and prefers a sunny position.

Euphorbia Blackbird, Blackbird spurge (Euphorbiaceae), exhibited by Patricia McGrath, grown in Silver Lake.

This striking perennial shrub of garden origin is derived from a cross between *Euphorbia amygdaloides* and *Euphorbia martini*. Despite its dark purple foliage, it has recently been shown to be surprisingly heat tolerant in California. It has dramatic spikes of yellow flowers held above the foliage on red stems in spring and reaches about 2 feet tall and wide. It has moderate water needs and is fairly hardy, but be aware that this plant may be poisonous.

Pyrus calleryana 'Sierra Blanca', Sierra Blanca callery pear (Rosaceae), exhibited by John Schoustra, grown in Somis.

This decorative tree will reach 30 to 40 feet tall and wide and is an attractive deciduous ornamental. Single, white flowers are borne abundantly in spring and it has attractive shiny, green foliage that turns bright red before leaf drop. This tree requires moderate water and full sun, and is reported to be resistant to fire blight.

Photographs: *Deppea splendens* 'Cristobal' (upper right); *Salvia costaricensis*, *Datura metel* cultivar and *Euphorbia* 'Blackbird' (bottom left to right).

Contact individual locations to confirm events and for more details; some may require a facility entry fee.

COFFEE IN THE GARDEN WITH JOAN CITRON

Article and Photographs by Yvonne Savio

The inaugural “Coffee In the Garden” garden tour was enjoyed on Saturday morning, February 23, 2013, by some 50 SCHS members and guests. The beautiful spring day with temperatures in the 70s made for perfect weather to wander in the garden and formulate personal queries for Joan when she arrived.

As guests queried out loud “Oh, I wonder what that is!” and exclaimed at how well-developed some of the plants were, and well-pruned the crape myrtles were, other members ventured their thoughts and mutual appreciation. **Steve Gerischer** and **Joel Lichtenwalter** were able to answer some questions since they had visited with Joan in her garden in the past.

Succulents and cacti are impressively enormous, and some were blooming.

Blooming bulbs included yellow and orange *Bulbinella*, star-shaped *Gladiolus murielae*, tiny *Iris reticulata*, and *Lycoris radiata*. Her *Amaryllis belladonna* bulbs sent up a multi-colored sport, with differing shades of pink on each stem, and an great number of blooms – so she’s gradually culling the “regular” pale pink ones.

Some annuals like pansies offer color highlights until perennials and other plants come into bloom.

Roses throughout the garden were just putting out their newest foliage. But one – a mystery even to Joan – bloomed in a delicate creamy pink.

Another of Joan’s special passions is her rocks. In exquisite colors and patterns, they’re carefully placed throughout the garden and highlight nearby plantings.

Once Joan arrived, everyone eagerly listened to her stories of successes and tribulations. Some bits:

- The garden’s water table is some 20 feet down, so she doesn’t have to water her trees.
- The garden soil is rich, so she doesn’t fertilize.
- She does apply some mulch, but not very thickly.
- Frosts result in plants being replaced. Others thrive as a result.
- She does water, but only periodically with a hose for specific plants.
- She pruned her crape myrtles to 5 feet tall so they wouldn’t be taller than she is, and she could see beyond them to the rest of the garden.
- Joan’s great frustration with the formal mandala pattern is with plantings of multiple plants – like five on either side of a pathway – only to have one do poorly or another die – destroying the symmetry of her plan.
- Joan simplifies and edits her garden constantly – trading some items, and providing many extras at our SCHS meetings.

I was pleased to serve on the Coffee In the Garden committee and wish to thank fellow members **Joel Lichtenwalter**, **Al** and **Pat Steen** and **Laura Bauer** for a wonderfully successful tour and yummy refreshments.

UPCOMING 2013 SCHS PROGRAMS

At Friendship Auditorium, 3201 Riverside Drive, Los Angeles CA 90027, starting at 7:30 pm, unless otherwise noted.

May 9 – Scott Calhoun will present *Succulently Yours: Lessons from the Desert Southwest*, with a focus on our region. He will be selling and signing copies of all six of his books.

June 13 – To be announced.

July 11 – Amelia Lima will present a program about Roberto Burle Marx, Brazilian landscape architect.

NEWSLETTER EDITOR CHANGES

This newsletter ends my second term serving as your editor, this time for the past two and a half years. I greatly enjoyed producing the newsletter each month, but am not able to continue because of time constraints.

Until our next editor is found, **Steve Gerischer** has generously volunteered to be our newsletter editor in the interim. He did a terrific job last year when I was on leave for three months. Let's give him our support and thanks. He is already handling a large number of SCHS responsibilities and could use a helping hand, so if you are interested in the editor duties, please let Steve know.

I wish to express my gratitude to all of you who have been involved in the newsletter during my recent term, including my husband, Joe Galliani. Thanks so much for your contributions, your readership and your warm support.
